

## Recommended Site Management

### Summary

Recommended site management provides the function to register and manage the sites required for the progress of task as recommended sites with approval of the administrator.

### Description

### Package Dependency

Recommended site package has direct functional dependency to the common package (cmm) of element technology only. However, it forms the deployment file together with calendar package between packages so as to be executed without error during component deployment.

## Class Diagram

**Related Table**

Table Name	Table Name(English)	Remarks
Recommended Site Information	COMTNRECOMENDSITEINFO	Manage recommended web site.

## Related Function

Recommended site management function is largely composed of **Recommended Site List Inquiry**, **Recommended Site Detailed Inquiry**, **Recommended Site Registration**, **Recommended Site Update** function.

## Recommended Site List Inquiry

### Business Rule

A screen to be used by the administrator, not the general user. Administrator can inquire list with inquiry conditions, or click the Register button to move to the Register Recommended Site screen for registration of recommended site.

### Related Codes

### Screen and execution manual

Action	URL	Controller method	QueryID
List Inquiry	/uss/ion/rec/RecomendSiteListInquire.do	selectRecomendSiteList	"RecomendSiteManageDAO.selectRecomendSiteList"
			"RecomendSiteManageDAO.selectRecomendSiteListTotCnt"

Recommended site list is inquired by 10 items per page. The paging consists of 10 pages. The condition of search is implemented by the term name and English name. To change the scope of research per page, change the pageUnit, pageSize of context-properties.xml.(provided, however, that relevant setting affects overall common service function.)
