

Site Map

Summary

The site map shows available menu for the authority of user who logged in to JSP in the menu creation screen at one glance and provides the link to the relevant menu when the relevant menu is clicked.

- Function Flow

Description

Package Dependency

The sitemap package has direct functional dependency to the common package (cmm) of element technology only. However, form the deployment file together with mail connection interface, shortcut menu management, menu creation management, menu management, program management, format/date/calculation, system (sim), calendar, web editor and zip code package according to the reference relationship between packages so as to be executed without error during component deployment.
