Template-based Code Gen

Summary

This feature allows easy creation of a eGovFrame-based CRUD program or required Configuration/Property files using pre-defined templates.
Implementation tools in the eGovFrame IDE provides following features for generation of the template-based code.

Description

Auto Creation of the CRUD Program
Automatically creates executable CRUD Java Code, Jsp, SqlMapConfig File, and SqlMap File from database table.

Auto Creation of Configuration Files
Automatically creates Configuration/Property files for eGovFrame runtime environment.

- Data Source
- Transaction
- Cache
- Id Generation
- Logging
- Property
- Scheduling

Adding custom templates
Adds user created Configuration for project and user settings to implementation tool.
