

Summary

Identification of mobile devices provides the functions to check operation system, type of browsers and versions by comparing user-agent of the mobile device.

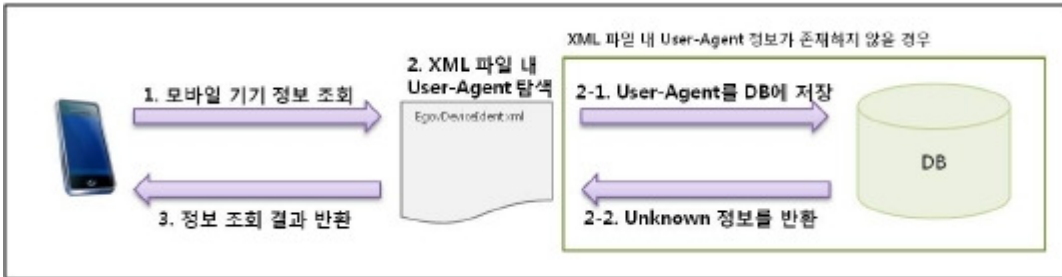

The user-agent refers to the user-agent field data of the HTTP Protocol Header containing the information of the browser. The user-agent displays different values in each operation system and browser. The user can get the information on the operation system and the browser of the currently connected devices.

*Function Flow

*Device Identification Flow

Mobile device information inquiry for users

When the user inquires device information through the mobile device, the server primarily searches the user-agent value from the “EgovDeviceIdent.xml” file and provides information. When there is no information in the XML file, the user-agent value is registered on the DB and provides unknown information.

Mobile device information management for managers

The manager can input newly registered user-agent information through the mobile device information management page. When the mobile device information is input and updated, the update is reflected on the “EgovDeviceIdent.xml” file.

The development and testing of the mobile screen of this component is completed. It is also noted in development since the supports on HTML5 and CSS3 vary between the PC browser and mobile browser in the same brand.

The tested device and browsers are GalaxyS2, GalaxyS, iPad2, iPhone4, GalaxyTab1 and the web browsers, Firefox, Safari, Opera Mobile.

The test results are as following.

Android
 The operation of HTML5, CSS3 and components of the Firefox(6.xx) and opera mobile was stable in android OS 2.3 (gingerbread). However, in the lower version browsers, android 2.1, 2.2, the operation of components was unstable and UI realization was not smooth due to insufficient HTML5 and CSS3 supports.

For Opera Mobile, it caused problems in colors and event processing in UI. Therefore, it was excluded from the subject. Galaxy, GalxyS2 and GalaxyTab1 were chosen as test mobile devices.

iOS
 The iOS is one of three supported browsers and was tested in versions 4.2 and 4.3. The support for HTML5 and CSS3 were relatively smooth. iPhone4 and iPad2 were chosen as test mobile devices.

Description

The mobile device identification is composed of the management function, mobile device information list inquiry, detailed inquiry, register, update and delete, as well as the mobile information inquiry. (Refer to Related Function)

Class Diagram

modification and deletion.

For authentication, you can connect with login, membership management and permission management components. If you use Spring Security for authentication, make change as in the followings.

src/main/java/resources/egovframework/spring/com/context-common.xml

```
<!--Service class that can check the authenticated user's LoginVO, permissions and authentication-->
<bean id="egovUserDetailsHelper" class="egovframework.com.cmm.util.EgovUserDetailsHelper">
  <property name="egovUserDetailsService">
    <ref bean="egovUserDetailsService" />
  </property>
</bean>

<!-- Bean that will use Security-based authentication-->
<bean id="egovUserDetailsService" class="egovframework.com.sec.ram.service.impl.EgovUserDetailsServiceImpl"/>
```

web.xml

```
<!-- 2. Spring Security Setup-->
<filter>
  <filter-name>springSecurityFilterChain</filter-name>
  <filter-class>org.springframework.web.filter.DelegatingFilterProxy</filter-class>
</filter>
<filter-mapping>
  <filter-name>springSecurityFilterChain</filter-name>
  <url-pattern>/*</url-pattern>
</filter-mapping>

<listener>
  <listener-class>org.springframework.security.ui.session.HttpSessionEventPublisher</listener-class>
</listener>
<!-- security end-->

<!-- 4. Filter setup for Spring Security logout setup-->
<filter>
  <filter-name>EgovSpringSecurityLogoutFilter</filter-name>
  <filter-class>egovframework.com.sec.security.filter.EgovSpringSecurityLogoutFilter</filter-class>
</filter>
<filter-mapping>
  <filter-name>EgovSpringSecurityLogoutFilter</filter-name>
  <url-pattern>/uat/uia/actionLogout.do</url-pattern>
</filter-mapping>

<!-- 4. Filter setup for Spring Security login setup -->
<filter>
  <filter-name>EgovSpringSecurityLoginFilter</filter-name>
  <filter-class>egovframework.com.sec.security.filter.EgovSpringSecurityLoginFilter</filter-class>
</filter>
<filter-mapping>
  <filter-name>EgovSpringSecurityLoginFilter</filter-name>
  <url-pattern>*.do</url-pattern>
</filter-mapping>
```

As in the above, add Spring Security filter to web.xml.

For details on login/membership management/permission management, refer to the followings.

login:[general login](#)

Membership management:[user management](#)

Permission management:[Permission management](#)

The following pages need the user/administrator permissions.

Permission type	Page path	Description
User	/mbl/com/mdi/goMobileDeviceIdent.mdo	Mobile device information inquiry screen
Administrator	/mbl/com/mpa/selectDeviceIdentList.mdo	Mobile device information list inquiry screen
Administrator	/mbl/com/mpa/selectDeviceIdent.mdo	Mobile device information detail inquiry screen
Administrator	/mbl/com/mpa/goDeviceIdentRegist.mdo	Mobile device information registration screen
Administrator	/mbl/com/mpa/insertDeviceIdent.mdo	Mobile device information registration
Administrator	/mbl/com/mpa/goDeviceIdentUpdt.mdo	Mobile device information modification screen
Administrator	/mbl/com/mpa/updateDeviceIdent.mdo	Mobile device information modification
Administrator	/mbl/com/mpa/deleteDeviceIdent.mdo	Mobile device information deletion

Settings and Notes

*The currently distributed mobile common component adopts HTML5 and CSS3 and this means that it doesn't support the standards for mobile web site validity check of MobileOK and W3C. For details on correct validity check, please contact the competent professional institute.

*Security verification is under progress on the currently distributed mobile component. We plan to complete security verification as soon as possible to release a new security-patched version.

Environmental settings

The followings are required items and the environment settings to utilize Mobile device identification functions.

Property file setup

mdi.properties

```
#-----
#
# mdi.properties : Config file that shows mobile device information
#
#-----
# 1. key = value structure
# 2. The key cannot include space. The value can include space
# 3. Korean is not allowed for key, but allows for value.
# 4. To create a new line, put '\n' to the end of the line(to use '\n' letter, use '\\n')
# 5. In Windows, use '\\\n' or '/' as the directory symbol (do not use '\n')
# 6. In Unix, use '/' as the directory symbol
# 7. For comments use #.
# 8. If there is space after a value, an error may occurs when referenced in the sublets, use trim() or set the property value without space.
#-----

# Mobile device information XML file
deviceIdentXMLPath = c:/EgovDeviceIdent.xml
```

In the above, you have to set #DeviceIdentXMLPath. This designates the path of the XML that contains mobile device information.

```

<?xml version="1.0" encoding="UTF-8"?>
<DeviceIdents>
  <DeviceIdent>
    <UserAgent>Mozilla/5.0 (iPhone; U; CPU iPhone OS 4_2_1 like Mac OS X; ko-kr) AppleWebKit/533.17.9 (KHTML, like Gecko) Version/5.0.2 Mobile/8C148 Safari/6533.18.5</UserAgent>
    <Browser>Safari 5.0.2</Browser>
    <OS>iPhone</OS>
  </DeviceIdent>
  <DeviceIdent>
    <UserAgent>Mozilla/5.0 (Android; Linux armv7l; rv:5.0) Gecko/20110615 Firefox/5.0 Fennec/5.0</UserAgent>
    <Browser>Firefox 5.0</Browser>
    <OS>Android</OS>
  </DeviceIdent>
  <DeviceIdent>
    <UserAgent>Opera/9.80 (Android 2.3.3; Linux; Opera Mobi/ADR-1107051709; U; ko) Presto/2.8.149 Version/11.10</UserAgent>
    <Browser>Opera 9.80</Browser>
    <OS>Android</OS>
  </DeviceIdent>
  <DeviceIdent>
    <UserAgent>Mozilla/5.0 (Linux; U; Android 2.3.3; ko-kr; Build/GINGERBREAD) AppleWebKit/533.1 (KHTML, like Gecko) Version/4.0 Mobile Safari/533.1</UserAgent>
    <Browser>Android 2.3.3</Browser>
    <OS>Android</OS>
  </DeviceIdent>
</DeviceIdents>

```

The above file is the xml that contains browser and OS information per user agent. A user, when connecting using Mobile device identification, can get browser and OS information. This file can be edited from the administrator's page.

Related functions

Mobile device identification is largely composed of Mobile device information inquiry for users, Mobile device information list inquiry for administrators, Mobile device information detail inquiry, Mobile device information registration, Mobile device information modification and Mobile device information deletion.

Mobile device information inquiry

Business rules

You can retrieve the identified Mobile device information.

Related codes

N/A

Screen and execution manual

Action	URL	Controller method	QueryID
device information inquiry	/mbl/com/mdi/selectMobileDeviceIdent	selectMobileDeviceIdentList	"DeviceIdentDAO.selectDeviceIdentList"

Mobile device identification information list inquiry

Business rules

You can use the inquiry conditions to retrieve lists. You can click the Register button to move to Mobile device identification information registration screen to register Mobile device identification information.

Related codes

N/A

Screen and execution manual

Action	URL	Controller method	QueryID
Inquiry	/mbl/com/mdi/selectDeviceIdentList.mdo	selectDeviceIdentList	"DeviceIdentDAO.selectDeviceIdentList"
	/mbl/com/mdi/selectDeviceIdentList.mdo	selectDeviceIdentListTotCnt	"DeviceIdentDAO.selectDeviceIdentListTotCnt"
Register	/mbl/com/mdi/goDeviceIdentRegist.mdo	goDeviceIdentRegist	
Click list	/mbl/com/mdi/selectDeviceIdent.mdo	selectDeviceIdent	"DeviceIdentDAO.selectDeviceIdent"

10 Mobile device identification information lists are retrieved per page and paging is carried out on 10 page basis. The search conditions are browser, OS and registration status. To change the search range per page, modify pageUnit and pageSize in context-properties.xml (This setting have an influence on the entire common service functions.).

Inquiry: to retrieve Mobile device identification information, select search conditions in the top, enter a key word and click the Inquiry button.

Register: to register Mobile device identification information, use the Register button in the top to move to Mobile device identification information registration screen.

Click list: moves to Mobile device identification information detail inquiry screen.

Mobile device identification information detail inquiry

Business rules

By clicking a list on Mobile device identification information list inquiry, you can move to this screen, which shows details on Mobile device identification information.

List	/mbl/com/mdi/selectDeviceIdentList.mdo	selectDeviceIdentList	"DeviceIdentDAO.selectDeviceIdentList"

On Mobile device identification information detail inquiry screen, you can carry out Mobile device identification information modification, Mobile device identification information deletion and Mobile device identification information list inquiry.

Modify: Click the Modify button to move to Mobile device identification information modifications screen to modify Mobile device identification information.
 Delete: Click the Delete button to delete information after being prompted to select whether to delete.
 List: Moves to Mobile device identification information list inquiry screen.

Mobile device identification information registration

Business rules

- The red * at the right of input entry indicates the required item.
- When stored, MDI_ID is automatically granted through "egovframework.rte.fdl.idgnr.impl.EgovTableIdGnrService".

```

Primary Key => MDI_ID : a serial number is automatically granted.
<bean name="egovDeviceIdentGnrService"
  class="egovframework.rte.fdl.idgnr.impl.EgovTableIdGnrService"
  destroy-method="destroy">
  <property name="dataSource" ref="dataSource" />
  <property name="blockSize" value="10"/>
  <property name="table" value="COMTECOPSEQ"/>
  <property name="tableName" value="MDI_ID"/>
</bean>
  
```
