Example of internationalization (Internationalization example)
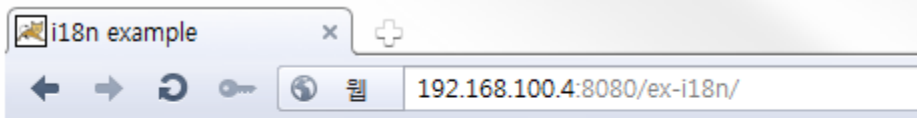

Summary

In the eGovFrame, the LocaleResolver provided by Spring MVC is used. Three types of LocaleResolver are furnished by Spring MVC in order to support many languages, and this is a simple example of internationalization which is made with the SessionLocaleResolver, among the above 3 types, in which locale information using the session is applied.
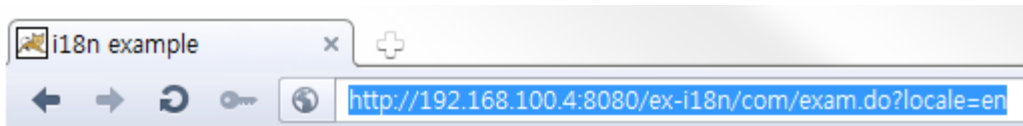

Description

1. When the example is executed, the menu and message are outputted with Korean alphabet.

2. When [English] is pressed, the menu and message are changed into the English phrases designated in the message.properties.
