

## Example of Spring Security (Spring Security Example)

### Summary

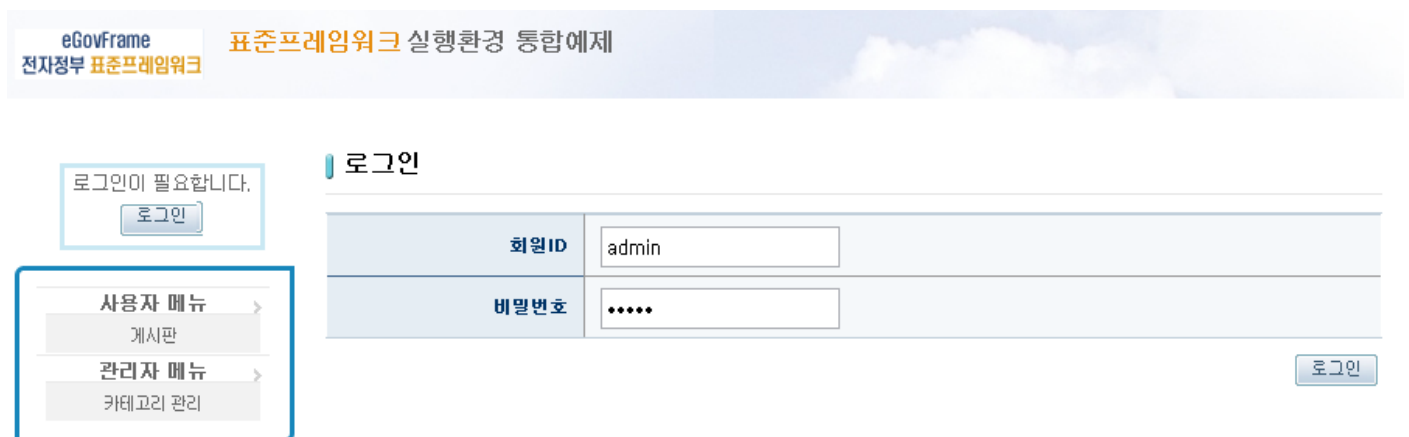

This is the example for the function of performing login, security, and authority management with the Spring Security. Login and authority management of the user, access to each page, control for output contents, etc., are performed by applying Spring Security 2.0.4, and example function for this is provided.

### Description

1. If corresponding example is executed, login enabled page is called.

2. Perform login by pressing [Login] button and using administrator ID and password indicated at main.

3. Welcome message is outputted and access to bulletin board and category management can be accomplished.
