Configuring Job Parameters

Outline

This section provides information on the management environment that enables the addition of Batch Parameter Components for user convenience during usage of test wizards provided by the Batch Development Environment.

Description

For Batch Test execution, register additional parameters.

How to Use

Configuring Job Parameters

Job Parameter Components

1. In the menu bar, choose Window>Preferences.

2. Select **eGovFrame>Batch>Job Parameter** from the list displayed on the right side of the preference page, then click on the "New" button.

Preferences				- 0 ×
type filter text	Job Parameter			← ▼ ⇒ ▼ ▼

3. Input desired name and value of the Job Parameter to be registered and select Data Type. Then, select "confirm" to add a new Job Parameter.

✓ Keep in mind that the name of the new Job Parameter must be different from previously added Job Parameters.

New Job Parame					
Parameter Name :	date				
Value :	2012.10.10				
Data Type :	Date 🗸				
Format :	yyyy.MM.dd 👻				
Note: Value를 Data Type과 일치하도록 등록해 주십시오.					
?	OK Cancel				

Application of Job Parameters during configuration of Batch Test

1. In order to create a new test file through <u>Batch Job Test Wizard</u>, click on the Add button located on the right side of "Job Parameters."

😂 eGovFrame Batch Job Test					- 0 X
