# Mobile Code Verification

## Summary

This skill is for verifying the eGovFrame source code against web standards.

## Description

Mobile Code Verification added to verify web standard compliance of the source code in eGovFrame based mobile environment. See the details below.

Supporting W3C verification Globally used W3C verification is available for verification of site URLs, file uploading, or manual inputs.

#### Supporting MobileOK verification

Korean MobileOK verification is available for verification of page URLs, site URLs, file uploading and FTP for the eGovFrame mobile project source code.

#### Manual

### Mobile Source Code Verification

#### Supporting W3C verification

- Page URLs
  - Choose eGovFrame > Implementation > Mobile Web Verification(W3C) > by Page URL from the menu.
