

Connection Log Management

Summary

Connection Log Management provides the functions of searching, inquiring system logged in/out log of the user.

Description

Connection Log Management can be used after the installation of **login package (egovframework-certlogin-2.0.0.zip)**.

(When it is executed after the single installation, error will be generated.)

Connection Log Management accompanies the functions of **registration, inquiry, and list** of the login log.

- ① Connection Log Registration: Register the login log information. - With AOP function
- ② Connection Log Inquiry: Inquire detailed contents of login log information.
- ③ Connection Log List: Search and inquire the list of login log information.

Package Dependency

Connection Log Management Package has direct functional dependency only for the common (cmm) package of element technology. However, in order to be executed without error during the component distribution, the distribution file is constituted with calendar package in accordance with the dependency between packages.

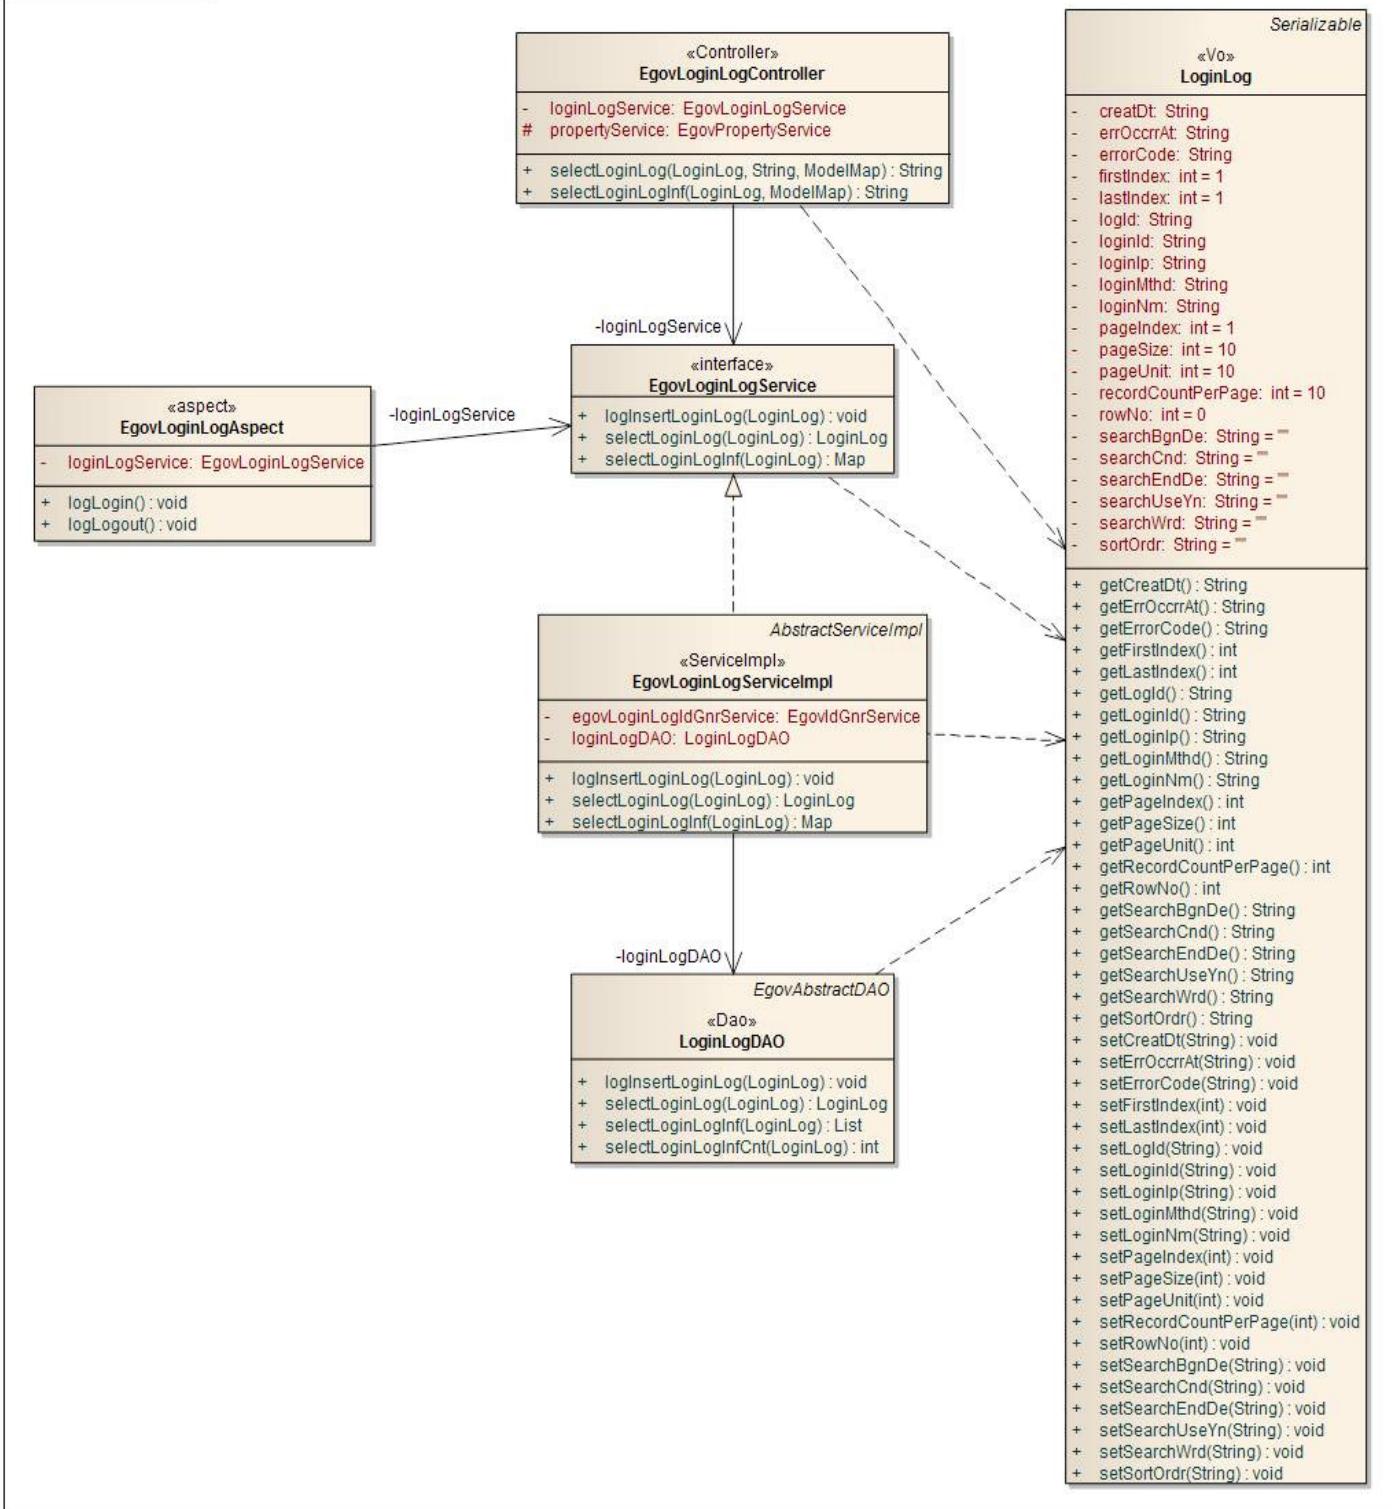

- Dependency between packages: [System management Package Dependency](#)

Class Diagram

ID Generation

ID Generation related DDL & DML

- In order to utilize ID Generation Service, **LOGINLOG_ID** item is added to COMTECOPSEQ which is the Sequence storage table.

```

CREATE TABLE COMTECOPSEQ (
    table_name varchar(16) NOT NULL,
    next_id DECIMAL(30) NOT NULL,
    PRIMARY KEY (table_name));
  
```

```
INSERT INTO COMTECOPSEQ VALUES('LOGINLOG_ID','0');
```

ID Generation Environment Setup (context-idgen.xml)

```
<bean name="egovLoginLogIdGnrService"
  class="egovframework.rte.fdl.idgnr.impl.EgovTableIdGnrService"
  destroy-method="destroy">
  <property name="dataSource" ref="dataSource" />
  <property name="strategy" ref="loginLogStrategy" />
  <property name="blockSize" value="1"/>
  <property name="table" value="COMTECOPSEQ"/>
  <property name="tableName" value="LOGINLOG_ID"/>
</bean>

<bean name="loginLogStrategy"
  class="egovframework.rte.fdl.idgnr.impl.strategy.EgovIdGnrStrategyImpl">
  <property name="prefix" value="LOGIN_" />
  <property name="cipers" value="14" />
  <property name="fillChar" value="0" />
</bean>
```

Related Table

Name of table	Name of table (English)	Remarks
Connection Log	COMTNLOGINLOG	Manage login log information.

AOP

egov-com-loginaop.xml

```
<bean id="egov.loginlog"
  class="egovframework.com.sym.log.clg.service.EgovLoginLogAspect" />

<aop:config>
  <aop:aspect id="egov.loginLogAspect" ref="egov.loginlog">
    <!-- Login Method -->
    <aop:before pointcut="execution(public * 
egovframework.com.uat.uaia.web.EgovLoginController.actionMain(..))" method="logLogin" />
    <!-- Logout Method -->
    <aop:before pointcut="execution(public * 
egovframework.com.uat.uaia.web.EgovLoginController.actionLogout(..))" method="logLogout" />
  </aop:aspect>
</aop:config>
```

Set up the [AOP](#) to implement system log registration function.

- Create EgovLogManageAspect class to implement system log registration function.

```
package egovframework.com.sym.log.clg.service;

import javax.annotation.Resource;

import egovframework.com.cmm.LoginVO;
import egovframework.com.cmm.util.EgovUserDetailsHelper;

public class EgovLoginLogAspect {

  @Resource(name="EgovLoginLogService")
  private EgovLoginLogService loginLogService;
```

```

/**
 * Create login log information.
 * EgovLoginController.actionMain Method
 *
 * @param
 * @return void
 * @throws Exception
 */
public void logLogin() throws Throwable {

    String uniqId = "";
    String ip = "";

    /* Authenticated */
    Boolean isAuthenticated = EgovUserDetailsHelper.isAuthenticated();
    if(isAuthenticated.booleanValue()) {
        LoginVO user = (LoginVO)EgovUserDetailsHelper.getAuthenticatedUser();
        uniqId = user.getUniqId();
        ip = user.getIp();
    }

    LoginLog loginLog = new LoginLog();
    loginLog.setLoginId(uniqId);
    loginLog.setLoginIp(ip);
    loginLog.setLoginMthd("I"); // Login:I, Logout:O
    loginLog.setErrOccrrAt("N");
    loginLog.setErrorCode("");
    loginLogService.logInsertLoginLog(loginLog);

}

/**
 * Create logout log information.
 * EgovLoginController.actionLogout Method
 *
 * @param
 * @return void
 * @throws Exception
 */
public void logLogout() throws Throwable {

    String uniqId = "";
    String ip = "";

    /* Authenticated */
    Boolean isAuthenticated = EgovUserDetailsHelper.isAuthenticated();
    if(isAuthenticated.booleanValue()) {
        LoginVO user = (LoginVO)EgovUserDetailsHelper.getAuthenticatedUser();
        uniqId = user.getUniqId();
        ip = user.getIp();
    }

    LoginLog loginLog = new LoginLog();
    loginLog.setLoginId(uniqId);
    loginLog.setLoginIp(ip);
    loginLog.setLoginMthd("O"); // Login:I, Logout:O
    loginLog.setErrOccrrAt("N");
    loginLog.setErrorCode("");
    loginLogService.logInsertLoginLog(loginLog);
}

}

```

Related Functions

Connection log management is divided into the **connection log list inquiry**, **connection log detailed inquiry** functions.

Connection Log List Inquiry

Business Rule

Login log list is inquired with the unit of 10 cases per page, and paging is realized with the unit of 10 pages. Search condition is performed for the generation date and log type.

Action	URL	Controller method	QueryID
List inquiry	/sym/log/clg/SelectLoginLogList.do	selectLoginLogInf	"LoginLogDAO.selectLoginLogInf",
			"LoginLogDAO.selectLoginLogInfCnt"

The screenshot shows a search interface for login logs. It includes fields for '로그인 로그조회' (Login Log Inquiry), '발생일자' (Date Range) with two date pickers, '로그유형' (Log Type) with a dropdown, and a '조회' (Search) button. Below the search bar is a table with columns: 번호 (Number), 로그ID (Log ID), 발생일자 (Date), 로그유형 (Log Type), 요청자 (Requester), 요청자IP (Requester IP), and 상세보기 (Detail View). The table contains 7 rows of log entries, each with a detail view icon.

번호	로그ID	발생일자	로그유형	요청자	요청자IP	상세보기

7	LOGIN_00000000157278	2009-04-28		마스터	127.0.0.1	

1

In order to perform the login log detailed inquiry function, click the **Detail View** button.

Connection Log Detailed Inquiry

Business Rule

Login log detailed inquiry is comprised of pop-up windows, and when the **Close** button is clicked, the window is closed.
